GraniteWMS Key Value Propositions

Accuracy

picking, packing and inventory control

Efficiency

workflow management and optimisation

Integrity

process adherence and traceability

GRANITE
WAREHOUSE MANAGEMENT SYSTEM

ACCURACY

bring the work to the product

When receiving, moving or counting stock, writing down codes, ticking off lines, and scribbling quantities to be captured afterwards is just not accurate.

GraniteWMS brings the work to the product

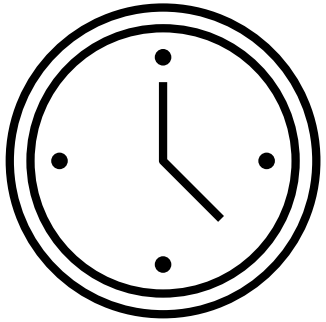
- Barcode scanning with immediate validation ensures both accuracy and speed
- Label printing immediately identifies and tracks each item

GRANITE
WAREHOUSE MANAGEMENT SYSTEM

EFFICIENCY

Find the product every time

Without proper tracking, stock that is mis-shelved effectively disappears. Hours can be lost hunting for stock that is hiding in plain sight



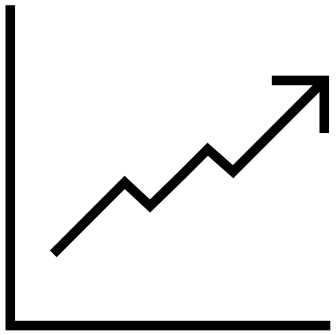
Location Management - find the product every time

- GraniteWMS manages locations at any level of granularity
- If it is LIVE as the work happens then all stock can be found

GRANITE
WAREHOUSE MANAGEMENT SYSTEM

INTEGRITY

Scan and track physical goods



Managing people, productivity and KPI's in the warehouse requires active tracking of every inventory transaction.
Traceability to physical stock - boxes, pallets, individual items - is only possibly if every item is physically scanned when it is handled.

GraniteWMS lets you scan and track physical goods

- GraniteWMS tracks every person from when they sign on, to every physical transaction they perform.
- Moving stock, picking stock, packing stock, counting and adjusting are all tracked and managed
- Track every physical item, box or pallet with a unique code. Every time a transaction involves an item, it is scanned, recorded and reported

WAREHOUSE MANAGEMENT SYSTEM

INTEGRATION

GraniteWMS integrates fully with SAGE200, SAGE300, and SAP Business One

Many accounting systems are just not built with the focus of a WMS system.

Adding a barcode-based WMS to a great Accounting solution will allow you to deliver product accurately with zero mistakes.
